

# Introducing Check Conversion Plus<sup>SM</sup> Imaging

Check Center has added another product to their check offerings: Check Conversion Plus with Imaging. This product allows a merchant to convert a check using a check imager.

Check Conversion Plus with Imaging offers a convenient, efficient and secure way to manage future check payment systems while providing benefits for the merchant. With each authorized check, funds are electronically processed into the merchant's account, meaning fewer trips to the bank, reduced fees and less paperwork. This new service allows conversion of business checks, another competitive advantage for you.

## How It Works

### Step 1

Customer chooses to pay with a check for products and/or services.

### Step 5

A receipt prints for the customer to sign. The customer and the merchant each retain one copy of the receipt.

### Step 2

Merchant confirms that guidelines are met and processes the check by running it through a check reader connected to their POS device.

### Step 6

Check is stamped Void and returned to the customer. Merchant batches out at end of day.

### Step 3

The merchant will scan the customer's check and enter the prompted transaction/check information.

### Step 7

Check Center debits the customer's account. Merchant generally receives funding for the check amount within 48-72 hours.

### Step 4

The Image will be transmitted and stored securely at Check Center.

### Step 8

The merchant may view the transaction on the Check Center website at any time and set up personalized reporting.
